# Aquatic Centers

**Build Faster**

Engineered & Manufactured by Sprung Structures

**Philip S. Miller Park**  
Town of Castle Rock, Colorado  
110' wide x 105' long

When the growing town of Castle Rock needed an all-season enclosure to house the extensive new pool facilities being installed at Philip S. Miller Park, stakeholders turned to Sprung for a fast, cost-effective and durable solution that would meet the community's strict building codes.

Sprung designed and delivered a bright, energy-efficient, low-maintenance structure where residents can swim year-round. Now part of the town's 64,000-square-foot Miller Activity Complex, the fully insulated enclosure encompasses two waterslides, four lap lanes and a vortex pool. It also features translucent doors and daylight panels for optimal natural light.

**Idaho Central Aquatic Center**  
Boise, Idaho  
120' wide x 315' long

As Idaho's Treasure Valley continued to grow in population, local stakeholders wanted to build a world-class aquatic center in the area in order to host competitive events. After touring another Sprung aquatic facility and learning more about the structure's expedited timelines, cost savings and unique characteristics, they opted to go with a Sprung building.

Today, the Idaho Central Aquatic Center (ICAC) is considered one of the largest competitive indoor pool facilities in the western United States. Featuring daylight panels, a custom glazing wall and an attractive mosaic pattern on its membrane, the ICAC encompasses two state-of-the-art Myrtha Pools and seating to accommodate over 1,000 spectators.

**Kearns Oquirrh Park Fitness Center**  
Kearns, Utah  
120' wide x 195' long

When Kearns Oquirrh Park Fitness Center needed to cover its outdoor, Olympic-sized swimming pool so that local schools could use it for water polo competitions year-round, leaders at the center chose a Sprung solution.

Sprung delivered a fully insulated, 23,400-square-foot aquatic facility that features a Salem Blue wave pattern on its membrane, daylight panels, translucent doors, a custom sprinkler system and seating for over 1,000 spectators. The modern facility also features a corridor that connects to the rest of the fitness center, as well as a specially designed lighting system that works to diffuse light and eliminate blind spots during competition.
