

# Controlled-Environment Agriculture

Giving plants the perfect day. Every day.

Airtight greenhouse

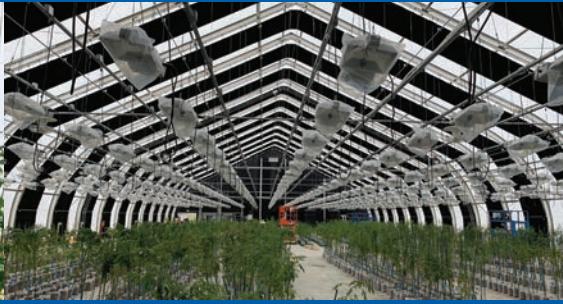

Rooftop growing

Engineered for high wind loads

Vertical growing

Cannabis structures

Superior light

Build  
Faster

Sprung Structures is a smart alternative for your greenhouse building needs. From small-scale greenhouse structures to commercial growing facilities, Sprung provides innovative building solutions that save time and money. Our patented, tensioned membrane structures deliver exceptional climate-control, rapid installation and clear-span interiors that maximize flexibility.

Engineered &amp; Manufactured by Sprung Structures

**Aurora Anguilla Resort  
Rendezvous Bay, Aurora Anguilla  
Two - 50' wide x 100' long**

Food sustainability in the Caribbean has long been an issue of concern. While many Caribbean islands have varying degrees of agricultural production, hurricanes, floods and other natural disasters continue to threaten the consistent production of fresh, affordable produce. Executives at the Aurora Anguilla Resort & Golf Club, on the island of Anguilla, wanted a reliable, hydroponic facility that would allow the resort to grow its own produce on-site.

Sprung designed and delivered two hydroponic greenhouse structures, providing 10,000 square feet of growing space. Sprung's greenhouse system represents the new standard in climate resilience, which is critical in helping to ensure the sustained operation of commercial farms in regions that are frequently threatened by cyclonic winds and flooding.

**Gröv-Bateman  
Utah  
100' wide x 180' long**

In the face of mounting agricultural challenges, including extreme weather events, water shortages, lack of arable land and problematic supply chain disruptions, Utah-based Gröv Technologies and Bateman's Mosida Farms partnered together to establish a year-round, climate-controlled feed production center. They turned to Sprung to provide a structure that could house 10 vertical-farming GröPods™ that are capable of growing approximately 25 tons of fresh animal feed per day.

Sprung delivered a highly durable, energy-efficient 100' x 180' structure to house the GröPods™, which, together, represent an annual traditional yield of nearly 750 acres on a footprint of 18,000 square feet, or less than half an acre.

**West Island College  
Calgary, Alberta  
40' wide x 60' long**

When students at West Island College (WIC) showed a rapidly growing interest in gardening, sustainable agriculture and food security, leaders at WIC realized the school would benefit from having a greenhouse facility on campus for year-round growing. Sprung designed and delivered a state-of-the-art, 40' x 60' greenhouse structure for the school's enthusiastic Garden Club.

With limited space on campus, it was determined that the greenhouse had to be installed on a sloped and uneven asphalt parking lot, requiring the creation of custom-fabricated, specialty base plates. The structure was secured in place with the base plate pins and earth anchors, which were driven several feet into the ground. Completed ahead of schedule and on budget, the greenhouse provides students at West Island College with an ideal growing environment, no matter the conditions outside.
