## BUILDING SOLUTIONS

**Build Faster**

Engineered & Manufactured by Sprung Structures

### American Samoa, Tsunami, 2009

After a brutal tsunami caused widespread damage to American Samoa in September 2009, Sprung was asked to provide 12 structures to serve as temporary school facilities for students in the region. Featuring Tedlar-coated membranes and measuring 30' x 60' each, the fully insulated, climate-controlled structures were engineered to withstand 140-mile-per-hour wind loads and were delivered a mere six days after the order was placed.

*"I wish you could have been there to see the Samoan children's smiles as they sat in the new dining room and in their new classrooms with air conditioning. It was awesome and gratifying, and it gave everyone from FEMA the feeling that we all made a difference."*

### New Orleans, Hurricane Katrina, 2005

Shortly after Category 5 Hurricane Katrina hit the Gulf Coast, Sprung supplied structures for a wide array of applications, including Salvation Army distribution facilities, Dole Food Company distribution facilities, a correctional facility replacement in New Orleans, parish school gymnasiums, churches and numerous other buildings for infrastructure replacement.

Built in accordance with the stringent Miami-Dade County Hurricane Compliance Code, Sprung structures are highly durable and can be easily dismantled and reassembled to meet future disaster relief building needs.

### The Philippines, Typhoon Haiyan, 2013

In 2013, after Typhoon Haiyan hit the Philippines, leveling tens of thousands of homes and displacing more than 580,000 people, Samaritan's Purse leapt into action to provide assistance. Needing a safe and reliable warehouse to store emergency supplies, the aid organization turned to Sprung to design and deliver a 40' x 100' structure to Tacloban, one of the hardest hit areas. Shipped and erected in three weeks, the structure housed blankets, tarps, hygiene kits, generators, mosquito nets and other vital supplies throughout the recovery period.
