Education

Build Faster

Engineered & Manufactured by Sprung Structures

**Harvard University, Massachusetts
Interim Dining Facility**
80' wide x 110' long

Harvard Business School's Kresge Hall, which was built in the 1950s and used primarily as an executive education dining center, was slated to be torn down to make space for a replacement facility. While the Business School stood to gain an important new building, it needed a temporary structure to serve as a dining space during construction. Not only did this interim structure need to be cost-effective and rapidly deployed, it also had to blend in with the other buildings on campus.

Sprung teamed up with Kitchens to Go (KTG) to supply a fully insulated, 80' x 110' building that featured glazing walls, translucent daylight panels and a wide array of modular kitchen amenities. Erected in just 29 days, the temporary facility was able to accommodate up to 400 diners at a time.

**Dartmouth College, New Hampshire
Student Center**
60' wide x 75' long

When leaders at Dartmouth College decided they wanted to add a cutting-edge, energy-efficient building to their campus, one where students could study, hold small club events or just unwind with friends, they turned to Sprung for an innovative and cost-effective solution.

Sprung designed and delivered a 60' x 75' structure that made an immediate positive impact on students and faculty, thanks to its high-tech look. Featuring a bright, clear-span interior, a tall peak height, translucent daylight panels and an attractive glazing wall for optimal light, Dartmouth College's new student center provides a welcoming, spacious and relaxing atmosphere where students can relax.

**Bigstone Cree Nation, Alberta
Athletic Pavilion**
140' wide x 175' long

When the Bigstone Cree Nation Education Authority launched its monumental plan to build a new, state-of-the-art high school, members determined that constructing a separate building to serve as the school's gymnasium would be a cost-effective move. Wanting a high-performing, energy-efficient structure that could be built much faster than a conventional gym facility, they turned to Sprung for a solution.

Sprung designed and delivered a fully insulated structure that houses a top-of-the-line running track, workout areas complete with strength training and cardio equipment, two high-definition screens, and a hardwood basketball court featuring the nation's logo in the center. To maximize efficiency, the building also features a dividing curtain that allows for simultaneous activities or PE classes, as well as a locker rooms, shower facilities, office, and separate entrances for after-school activities.
