# Film & Sound Stages

**Build Faster**  
Engineered & Manufactured by Sprung Structures

**Deck the Halls**  
Vancouver, British Columbia  
130' wide x 260' long  
(peak height 48 feet)

The hit movie Deck the Halls, starring Danny DeVito and Matthew Broderick as feuding next-door neighbors, was filmed on location in Vancouver, British Columbia. Since the Christmas-themed story required numerous snowy scenes, the production company, All Lit Up, opted to enclose the two main houses used for filming within a Sprung structure. This allowed them to create a controlled, artificial winter environment inside the enclosure. Additionally, the setup enabled the crew to film nighttime scenes during the day, significantly improving both time management and production efficiency.

The Sprung structure was assembled and crane-lifted into place over two existing homes in the City of White Rock (part of Metro Vancouver). An additional opaque black interior membrane was added to enhance the nighttime filming environment. Sprung's short-term lease program ensured a cost-effective solution for capturing the important scenes of the movie.

**Starship Troopers**  
Multiple locations  
Multiple structures

Released in 1997, Starship Troopers is an American science fiction film about an interstellar war between humanity and alien species over the colonization of outer space. Among the many sets required for the movie was "Planet P Station," a remote planet outpost in the 23rd century. Thanks to its high-tech, futuristic look, a Sprung structure was leased to serve as Planet P Station.

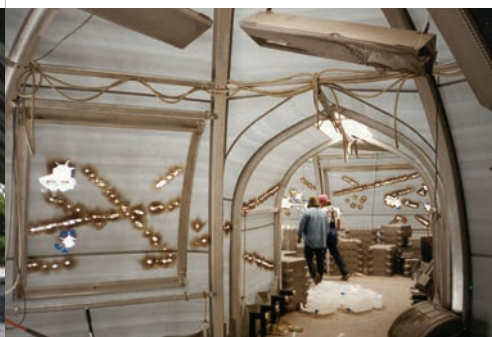

Producers also leased several Sprung structures to house various departments; special effects, wardrobe, props, craft services, set construction and the grid department all had their own structures on-site, which led to enormous cost savings on the production. The Sprung structures were also easily dismantled and relocated to other locations throughout the shoot.

**The Chosen**  
Midlothian, Texas  
Two - 120' wide x 270' long  
One - 70' wide x 135' long  
One - 70' wide x 90' long

For the third season of The Chosen, which is an American television series about the life of Jesus of Nazareth, producers wanted to build a stand-alone sound stage and supporting production complex near Midlothian, Texas.

Sprung teamed up with Pacifica Ventures and CRC Construction Group to design and construct two 22,000-square-foot, state-of-the-art sound stages complete with a 40-foot independent lighting grid and 9,000 square feet of offices. The unique design of the structure's wall system allows for a four-layer sound attenuation system with a minimum STC rating of 48. In addition to the sound stage, a number of Sprung support facilities were constructed to provide the crew with mill space, as well as areas for wardrobe, props, lighting and grip. The entire facility was constructed in just six months.
