Engineered & Manufactured by Sprung Structures

Houma Fire Department 60' wide x 60' long

When Hurricane Ida made landfall in southern Louisiana in 2021, it left a wave of devastation in its wake. Among the many buildings that were destroyed in the city of Houma, which sits just 10 feet above sea level, was the Houma Fire Department's Airbase Station. After a year and a half of navigating insurance policy claims and emergency relief grants, the Houma Fire Department asked Sprung to provide the community with a temporary, yet highly durable, fire station.

Construction of the Houma Fire Department's interim fire station took just days to complete. Measuring 60' x 60', this versatile, modifiable structure features four rolling service doors and can be easily repurposed and relocated as the department's needs evolve.

San Francisco Fire Department 60' wide x 75' long

As the San Francisco neighborhood of Treasure Island continued to experience significant growth, it became increasingly clear that the area needed its own fire station—and fast. The city's mayor issued an emergency order to get a station built as soon as possible.

Sprung designed a 60' x 75' building, which was delivered just three weeks after it was ordered and took just one week to construct. Requiring no foundation, the structure is earth-anchored, and its spacious, clear-span interior can house four fire trucks. It also features two garage doors, as well as daylight panels for optimal light.

Salt Lake City Fire Department 130' wide x 150' long

The Salt Lake City Fire Department (SLC Fire) provides fire fighting and emergency services for a catchment area that covers more than 90 square miles of land. When the department decided it needed a depot where it could store a large supply of reserve apparatus and equipment that had previously been scattered at stations throughout the city, members turned to Sprung for a fast and effective solution.

Sprung provided SLC Fire with a fully insulated, 19,500-square-foot warehouse, now known as the Logistics Building. The structure's tall peak heights and clear-span interior provide ample room for vehicles and equipment, as well as office space for department personnel, and its white interior lining and daylight panels create a bright and welcoming atmosphere.
