Engineered & Manufactured by Sprung Structures

Mount Palomar Winery
Temecula Wine Country, California
40' wide x 60' long

Located in the heart of Temecula Valley Wine Country in Southern California, Mount Palomar Winery has been producing award-winning wines since 1969. When the winery team decided they wanted to build a bright, open structure to serve as a wine-tasting, banquet and exhibition space on-site, they turned to Sprung for a fast and cost-effective solution.

Sprung designed and delivered a fully insulated, 40' x 60' structure with a Class A roof, ensuring customers and staff would remain sheltered from the elements during tastings and functions. The structure also features attractive glazing walls, which allow for lovely views of the winery and ample natural light throughout the building.

Longshots
Collinsville, Illinois
60' wide x 60' long

As part of a massive renovation plan, owners of Fairmount Park Casino & Racing wanted to add a new dining facility to their venue. With racing season just around the corner, they needed a durable, affordable building solution that could be deployed on an accelerated timeline, and they quickly recognized that a Sprung structure was the way to go.

Constructed in just 23 days (two days ahead of schedule), Fairmount Park's new restaurant and bar facility, known as Longshots, is fully insulated and features a spacious, clear-span interior, glazing walls for optimal racetrack views, and an attached, outdoor deck that allows patrons to get even closer to the action.

Marriott Atlanta, Cobb Ballroom
Atlanta, Georgia
70' wide x 120' long

Atlanta Marriott Northwest at Galleria is a modern, well-appointed hotel in northwest Atlanta, Georgia. The hotel urgently needed to add a new hospitality area but had limited space on its property.

After careful comparison between the benefits of a traditional building and those of a Sprung structure, staff at the Marriott concluded they could build a Sprung structure for about half the cost of traditional construction, in about two-thirds the time.

Erected where unused tennis courts previously stood, the 70' x 120' structure was completed in under three months and features an energy-efficient insulation package and an attractive yet flexible interior space.
