Build Faster

Engineered & Manufactured by Sprung Structures

## Polar Air Schiphol Airport, Holland

When Polar Air outgrew its facilities in Liege, Belgium, the company began looking for a more strategically located airport to serve its clientele. Schiphol Airport, in Amsterdam, became the airport of choice, but to make that location work, Polar Air had to build 110,000 square feet of warehouse space on-site.

After reviewing a number of building options, the Polar Air team concluded that Sprung would provide the best and fastest solution for meeting the company's storage needs. Three Sprung structures were delivered and installed within just eight weeks. Each one measures 130' x 280' and features state-of-the-art, rapid-rolling doors, as well as daylight panels to reduce lighting costs.

## Salvation Army Gulf Coast

In August 2005, Hurricane Katrina, a powerful Category 5 storm, hit the Gulf Coast and caused massive destruction in several states, including Louisiana, Mississippi and Alabama. In the storm's wake, the Salvation Army needed immediate, cost-effective structures to help with its disaster recovery work. Sprung supplied several 70' x 156' structures within three weeks of receiving the Salvation Army's order. Each structure featured engineered interior partitions, which helped workers provide a variety of different services, including food storage and distribution.

Sprung also supplied temporary and permanent structures to serve other needs after the hurricane, including warehouse buildings, correctional facility replacements, parish school gymnasiums, churches and more.

## Global Auto Processing Services Port Hueneme, California

Global Auto Processing Services (GAPS) required several structures to serve various functions at its new automotive processing facility, located at the U.S. Naval base in Port Hueneme, California. Not only did these structures have to be cost-effective and built quickly, their design had to allow for easy expansion in order to meet CAPS' evolving processing needs.

Sprung has provided six highly flexible, rapidly constructed buildings to the GAPS vehicle preparation center since its opening. Varying in size, these structures serve a number of different functions, from a facility for pre-delivery inspection to a paint and body shop, a building for housing parts, a warranty/repair department and more.
